

Abstract

Polyoxymethylene copolymers, their preparation and use

- 5 Copolymers are described containing blocks of the structural repeat units of the formula I and blocks containing structural units of the formula II

- 10 where R^1 is a divalent radical derived from a hydroxy-terminated aliphatic or cycloaliphatic oligomer or polymer which, where appropriate, has ether groups and/or carbonyloxy groups in the chain, and x is a whole number, at least 10.
- 15 The copolymers may be used for producing moldings.
